

Putting it all together: The policy context of applying the FLOW tools

Course description

These e-courses provide you with the background and ideas of the FLOW project and how you can get the most out of this online platform and this course. It looks at the current context in which we are working and the extent to which walking and cycling are generally incorporated in transport planning. It then addresses the paradigm shift that FLOW (and others) see as necessary in order for non-motorised transport to fulfil its potential in addressing issues of urban congestion.

Target audience

Transport planners in local authorities and consultancies with at least some experience doing impact assessment and transport modelling, other multipliers

Thematic area

Non-motorised transport & Transport modelling
