

City logistics

Course description

Urban freight transport and city logistics are important elements of urban mobility; however they are often disregarded by city planners. The objective of this course is to provide knowledge as well as good practice examples and solutions for this key area of city and transport planning.

Target audience

Those who are relatively new to city logistics who want to better integrate city logistics and urban freight into transport and city policies and planning and make city logistics more efficient and sustainable

Thematic area

Logistics
