

## How to encourage increased electric mobility in the logistics sector

### Course description

Electric vehicles in the logistics sector are a matter for the private sector. But does this mean there is nothing a city can do to encourage electric delivery vehicles? This course addresses the question of how cities can work with the private sector and what role the public sector can/should play in encouraging and supporting further electrification in the logistics sector.

### Target audience

Practitioners in local administrations across Europe with limited knowledge or experience in area but who are interested in seeing electric vehicles used for logistics in their cities

### Thematic area

Electric mobility
