

## Integrating new transport measures into your city's SUMP

### Course description

The TIDE project addresses a range of innovative measures in transport (pricing measures, non-motorised transport, data and traffic management, electric mobility, public transport organisation). This course addresses how innovations in each of these areas fit into the larger picture of sustainable urban mobility planning in your town, city or region.

### Target audience

Practitioners in local administrations across Europe with limited knowledge of SUMPs and how a range of measures can be integrated into them

### Thematic area

SUMP
