Course description

This course provides an overview of open access data including the key benefits and associated costs. It defines the requirements for open data and address city-specific issues. The course provides lessons learned from cities that have already implemented an open data policy and helps you to answer the question, "Can it work in my city?"

Target audience

Practitioners in local administrations across Europe with limited knowledge of the range of issues surrounding open data

Thematic area

Intelligent transport systems

Please click <u>here</u> to find the course.

Date of release

2014
