

Sustainable public transport

Course description

This course introduces sustainable public transport and helps participants begin to develop feasible measures to enable public transport to meet future needs. The course will help you consider the various policies, factors, institutions and stakeholders involved, recognise potential challenges and determine good forms of collaboration and involvement. Participants will learn the basics about sustainable public transport and measures to promote it at the local level.

Target audience

Those who are relatively new to integrated transport systems who would like to understand the components and processes to consider when improving public transport systems; this course focusses on helping cities that are relatively new to sustainable public transport

Thematic area

Public transport
