

Charging infrastructure for electric vehicles: What kind? Where? How?

Course description

Many cities feel pressure these days to move toward electric mobility, but there are still many unknowns. While there is no blueprint for installing EV charging infrastructure, this course will provide some basic information about different types of charging technologies and guidelines for their implementation. It will also offer an overview on quantifying the infrastructure needed, business models, partners and stakeholders, political instruments and financial incentives.

Target audience

Practitioners in local administrations across Europe with an interest in electric mobility but limited knowledge of charging technologies, business models and other aspects needed for their successful implementation

Thematic area

Electric mobility
