

Integration of urban nodes in the TEN-T corridors

Course description

The study on improving the efficiency of the transport system in urban nodes of the Trans-European transport core network contributed strongly to further develop the urban dimension of the TEN-T. This online course, which is available to all interested European urban nodes, contains facts, findings, recommendation and, above all, inspiration which could help them become more aware of the opportunities arising by being part of the TEN-T core network.

Target audience

Those city authorities that are interested in their city's role as an urban node and improving the transport efficiency of their urban node of the TEN-T core network

Thematic area

Transport system
